Jake

- Build out a notification system to ping engineers whenever a Quality Inspector creates or completes an NCR.
- Add filtering so team members can easily view NCRs with completed QI sections or see entirely finished reports.

Edin

- Create initial report templates and visual styling covering both the Quality Inspector and Engineering sections.
- Implemented backend functionality to generate and download PDF reports directly from NCR data.

Kayla

- Design and lay out the main user interface.
- Build out the workflow that lets engineers start, draft, edit, and submit their section of an existing NCR.
- Set it up so that when engineers finish their section, Purchasing gets notified automatically.

Jack

- Polish the ERD and updated relationships based on recent presentation feedback.
- Update the database based on new ERD redesign
- Expand the data model to include purchasing data and linked entities.

Steve

- Contribute to core feature implementation and code maintenance.
- Managed the GitHub repository, handled branching strategy, and reviewed/merged pull requests.
- Designed and assembled the project PowerPoint
